

NoWax Light:

light curing device with four fluorescent lamps for curing NoWax patterns and most common light curing resins.

NoWax Light benefits:

- 4 fluorescent lamps
- 36 W curing power
- Three different modes of operation:
 - 5 min, 10 min und continuous
- Easy lamp replacement
- optimized illumination

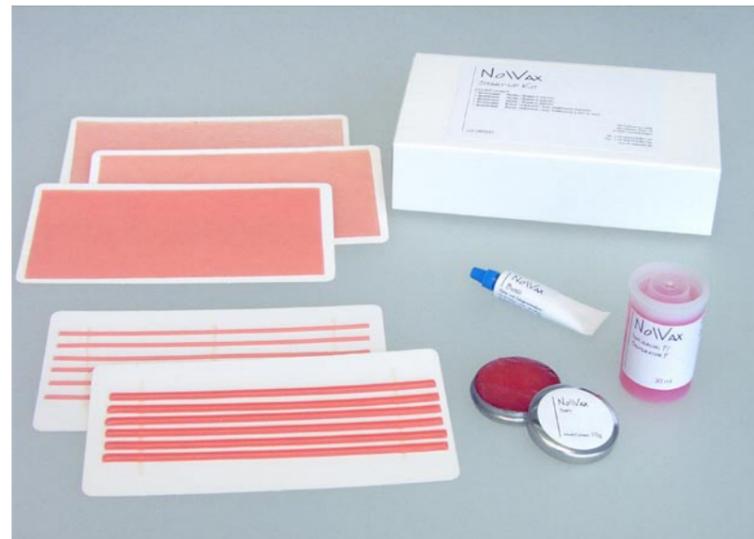

NoWax Light

Item-No. 1450-00

99.00€

NoWax Start-up Kit:

Content of the Start-up Kit:

Stipple sheet 0.35mm	1 sheet
Stipple sheet 0.55mm	1 sheet
Stipple sheet 0.75mm	1 sheet
Wire, half round 1.9x1.0mm 6 pcs./sheet	1 sheet
Wire, half round 3.0x1.7mm 6 pcs./sheet	1 sheet
Bond (NoWax glue)	5 g
Separator F	30 ml
Soft, putty	10 g

NoWax Start-up Kit Item-No. 4800-00

Light curing resin ...

... for free form designs in no time

NoWax

by TI-RESEARCH

Make Jewelry Models by Hand ...

NoWax is a unique new resin compound that can be easily modeled by hand to make jewelry patterns for lost wax casting. The patterns become hard after light curing and can be filed, drilled or machined.

Curing NoWax takes only a few minutes in our bench-top NoWax Light Box. Most common light curing devices can be used as well. The curing process can be easily monitored because NoWax changes its color from pink to yellow as it cures.

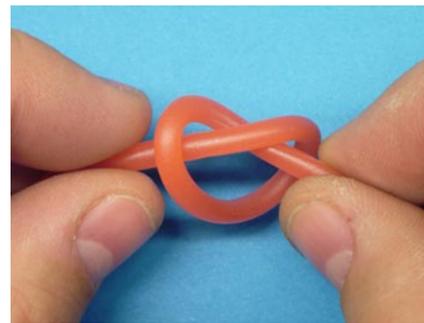

Complex designs can be easily formed by hand - your imagination is the only limit! More complex designs can be created by assembling separate parts using NoWax Bond. Reinforcing and other alterations can also be done using traditional wax materials.

New NoWax modeling compound resists high room temperatures and does not soften during modeling. No special cooling or other treatments are required to keep NoWax at the right consistency.

NoWax resin burns out cleanly during lost wax casting.

A variety of soft uncured shapes ...

... release your creativity.

After light curing ...

the material hardens.

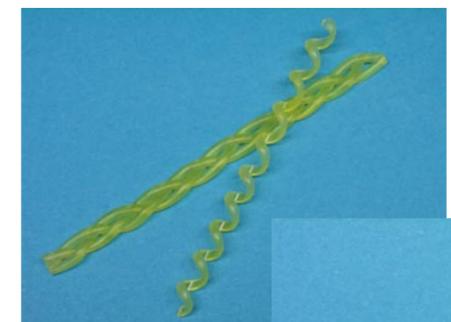

Complex arrangements are easy with Bond.

NoWax is perfect for lost wax casting - it burns out cleanly.

Imagination frozen in metal.

Complexity is limited only by your imagination.

... can be fixed easily with Bond, the light curing glue.

Little accidents ...

Hardened patterns can be adjusted by grinding or milling.

... the easy way.
